

Astronomy Follow-up
Lesson 6: Brahe, Kepler, and Galileo

Name: _____
Due Date: _____

(1) How was Kepler 's version of the heliocentric model different from Copernicus'?

(2) What is a Parallax shift and why did people believe it proved Copernicus wrong?

(3) When was the telescope invented and how did it help Galileo?

(4) How did Galileo help solidify the Copernican construct of the solar system?

(5) Do you think the evidence provided by Kepler and Galileo would have been as readily accepted prior to the Scientific Revolution? Why or why not?
