## How to Play Number Race 0 to 18, Game #1

- Put a racer on zero (0) on each of the five racetracks. We use centimeter cubes (■) to represent racers.
- Roll **2DD** (Two digit dice, each numbered 0 to 9).
- Use the number on each die to move a racer that *distance* on its racetrack from one numbered dot (●) to another numbered dot. If you roll **8** and **9**, you may move a racer on Track 4 or Track 5 a distance of **8** and also move a racer on Track 1, 3, or 5 a distance of **9**. If you have a racer on **9** on Track 1, 3, or 5, and roll a **9**, you may move that racer from **9** to **18** because **9** is the distance from **9** to **18**. If a racer is on **12** on Track 2, you must roll a **6** to move it to **18**. You may not use **7**, **8**, or **9** to move a distance of **6**.

In one **round**, every player gets a turn. The winner is the person who gets all of her or his racers to **18** at the end of a round, so it is possible for two or more players to win in a tie.

### How to Play Number Race 0 to 18, Game #2:

- Put a racer on zero (0) on each of the five racetracks. We use centimeter cubes (■) to represent racers.
- Roll **2DD** (Two digit dice, each numbered 0 to 9).
- Calculate a move. You may do this in the following ways:
  1. Use the number on each die to move a racer that *distance* on its racetrack from one numbered dot (●) to another numbered dot. If you roll **8** and **9**, you may move a racer on Track 4 or Track 5 a distance of **8** and also move a racer on Track 1, 3, or 5 a distance of **9**. If you have a racer on **9** on Track 1, 3, or 5, and roll a **9**, you may move that racer from **9** to **18** because **9** is the distance from **9** to **18**. If a racer is on **12** on Track 2, you must roll a **6** to move it to **18**. You may not use **7**, **8**, or **9** to move a distance of **6**.
  2. Add the two dice and use the sum as the distance to move **one** racer so that the racer lands on a numbered dot (●).

In one **round**, every player gets a turn. The winner is the person who gets all of her or his racers to **18** at the end of a round, so it is possible for two or more players to win in a tie.

### How to Play Number Race 0 to 18, Game #3:

- Put a racer on zero (0) on each of the five racetracks. We use centimeter cubes (■) to represent racers.
- Roll **2DD** (Two digit dice, each numbered 0 to 9).
- Calculate a move. You may do this in the following ways:
  1. Use the number on each die to move a racer that *distance* on its racetrack from one numbered dot (●) to another numbered dot. If you roll **8** and **9**, you may move a racer on Track 4 or Track 5 a distance of **8** and also move a racer on Track 1, 3, or 5 a distance of **9**. If you have a racer on **9** on Track 1, 3, or 5, and roll a **9**, you may move that racer from **9** to **18** because **9** is the distance from **9** to **18**. If a racer is on **12** on Track 2, you must roll a **6** to move it to **18**. You may not use **7**, **8**, or **9** to move a distance of **6**.
  2. Add the two dice and use the sum as the distance to move **one** racer so that the racer lands on a numbered dot (●).
  3. Subtract the two dice (larger – smaller) and use the difference as the distance to move **one** racer so that the racer lands on a numbered (●).

In one **round**, every player gets a turn. The winner is the person who gets all of her or his racers to **18** at the end of a round, so it is possible for two or more players to win in a tie.

## Number Race Play Notes

Hey, let's play Number Race. Each **Number Race 1 to 18** game has five racetracks numbered 1 to 5. In each racetrack, the **minimum distance** between numbered dots (●) is a **factor of 18**. A move on any track is a **multiple** of the minimum distance on that track. To begin a game, put a racer on **0** on each track. We use centimeter cubes to represent racers. To move a racer, roll **2DD** (two 10-sided dice, each numbered 0 to 9). Possible rolls on one die are 0, 1, 2, 3, ..., 8, and 9.

- **Track 1.** Minimum distance = 9. A move is a multiple of 9. If you roll two 9s in one turn, you may move a racer from 0 to 9 and then move the same racer from 9 to 18 in that turn. In Game #2 and Game #3, if you roll two 9s, add them to get 18.
- **Track 2.** Minimum distance = 6. A move is a multiple of 6. If you roll two 6s in one turn, you may move a racer a distance of 6 and then move the same racer another distance of 6 in that turn. In Game #2 and Game #3 you may add the dice to calculate a move. In Game #3 you may subtract the dice.
- **Track 3.** Minimum distance = 3. A move is a multiple of 3. If you roll a 6, you may move the racer from 0 to 6, 3 to 9, 6 to 12, 9 to 15, or 12 to 18. You may move the same racer twice in one turn. In Game #2 and Game #3 you may add the dice to calculate a move. In Game #3 you may subtract the dice.
- **Track 4.** Minimum distance = 2. A move is a multiple of 2. Rolls of 2, 4, 6, and 8 are good for this track. You may move the same racer twice in one turn. In Game #2 and Game #3 you may add the dice to calculate a move. In Game #3 you may subtract the dice.
- **Track 5.** Minimum distance = 1. Any roll from 1 to 9 gives you a move on this track. You may move the same racer twice in one turn. In Game #2 and Game #3 you may add the dice to calculate a move. In Game #3 you may subtract the dice. If your racer is stuck on 17 on Track 5 and you roll 5 and 4, calculate  $5 - 4 = 1$  and zoom that racer to the finish line.

Number Race 0 to 18 is one of many Number Race games. Others are:

- Number Race 0 to 12 using 2D6 (two 6-sided dice)
- Number Race 0 to 16 using 2D8 (two 8-sided dice)
- Number Race 0 to 20 using 2DD (two 10-sided digit dice, each numbered 0 to 9 with 0 representing 10)
- Number Race 0 to 24 using 2D12 (two 12-sided dice)
- Et cetera, et cetera

Look for them in the Bob & George pages of StarshipGaia.net.
